

PRYING TOOL WITH POSITIONABLE HANDLE

Abstract of the Disclosure

5 Disclosed is a prying tool having a head portion and a handle
portion. The handle portion can be positioned relative to an angle of the
head portion. Additionally, in some embodiments, the handle portion can
be separated from the head portion. Embodiments of the invention also
include a tool head having an aperture with a predetermined shape that
10 can be mated with a projection from a handle. The predetermined shape of
the aperture and projection allows the handle to be attached to the
removable head in a variety of positions.
